

MAKING THE
CASE FOR
INTACCT

MOVING UP TO INTACCT

Intacct is a cloud-based accounting solution that offers a variety of benefits to the small business growing into the mid-market. Inc. Magazine named Intacct as “Best for replacing QuickBooks.” It is ideal for businesses that have outgrown QuickBooks because it provides core financial and accounting applications, functions for general ledgers, accounts receivable and payable, cash and expense management, as well as applications for purchasing and order management.

Allowing for real-time reporting, Intacct provides decision-makers access to the information they need regarding the financial health of the business. The solution provides a dashboard for CEOs and other high level decision-makers that need a bird’s eye view of the business. It also handles multiple entities, allowing business owners to see the activities of all entities and the overall condition of their investments.

Streamlined automated processes with Intacct ensures users are able to consolidate financial activities across multiple entities and reduce internal costs by eliminating manual processes and duplicate entries in multiple systems. Intacct provides a high level of control to managers, with users given permission to use specific screens and functions.

Intacct is able to deliver superior integration with existing business systems. As a cloud-based software provider, Intacct specializes in seamless implementation with legacy systems and also offers scalability benefits. Intacct is capable of handling large data files and an increasing number of users. As a business gains customers in other countries, Intacct can easily accommodate numerous forms of currency.

Plus, Intacct enables users to quickly close a period and move on to new business. Growing companies that implement Intacct often experience heightened efficiency by speeding the monthly close cycle by weeks.

CLOUD VERSUS ON-PREMISE

The software market is increasingly moving to cloud-based technology. There are many reasons a business should consider cloud-based software for future investments, although cost, centralization capabilities and integration are essential to ensuring IT is willing to get on board.

Cost: Software available in the cloud is significantly less costly than an on-premise solution. Cloud software is housed by the software provider, so the small business will not require the purchase of new hardware. The maintenance and security of the software is also handled by the provider, so no new IT support is needed to invest in a cloud-based solution. Cloud software also offers subscription-based pricing, so a company generally only pays for the software tools they need.

Centralization: All of the security and support is handled by the software provider. The centralization of the software with the provider means that a more robust security level is possible. Updates and error resolution are handled by personnel that specialize in that particular software, so transitions and resolutions are quickly completed. The subscriber of cloud-based software enjoys continuous innovations from the software supplier.

Implementation: Cloud-based software allows for a quicker implementation of new software compared with on-premise solutions. The implementation is handled by the software vendor, with little interruption in the business process for the purchaser of the software. Updates are similarly seamless, handled in a centralized location and requiring minimal involvement by the small business.

THE VALUE OF ONE VISION

One Vision works with small businesses that are outgrowing spreadsheets and QuickBooks to help them implement the best software solution to meet their growing needs. One Vision's expertise in both accounting and technology allows them to provide an important service to small businesses attempting to navigate software decisions.

One Vision works with both cloud-based and on-premise software solutions, but the benefits of cloud technology make Intacct the best choice for many of their clients. With

a seasoned delivery team, One Vision delivers a client-first approach, prioritizing the needs of the client. A careful analysis is performed based on the client's requirements, determining the best fit for the client, rather than forcing a pre-chosen solution.

Through a consultative approach, One Vision experts work with small to mid-sized companies to help them determine the right software to address their growing accounting needs.

CONCLUSION

A business showing signs of growth may be experiencing pain along with excitement. There can be not only the benefits of growing, like increased revenues, but also the headaches of process inefficiencies and the limitations of systems that work well for small businesses.

Transitioning from QuickBooks or spreadsheets to a more comprehensive software system is an important decision, one that requires the insight of experts that know the intricacies of both accounting and software. Deciding whether to

use a cloud-based solution or on-premise software can significantly impact the cost of the implementation.

One Vision specializes in helping small businesses work through the transition from QuickBooks to more fully-integrated accounting systems. They have experience in helping clients choose the best software solution, and their knowledge of both accounting and the latest technology available make them an invaluable resource to growing businesses.
