

Beyond Software

Beyond Software is a powerful web-based project and financial management solution from the creators of Solomon Software. It has a robust suite of project accounting modules that will enable your organization to accurately track the actual time and cost of delivering your projects and provide you with the information to manage resources, billings, schedule tasks, and more.

Beyond Software allows you to keep a tight rein on all aspects of your project by monitoring the status and profitability in real time while enabling you to be more profitable by increasing visibility into projects, creating accountability within the projects and improving cash flow through faster and more accurate invoicing and expense management.

Your project managers are accountable for quality of service, as well as, profitability for projects. Beyond Software enables your project managers to focus your resources and continuously improve your project execution, while growing your profits. It allows them to balance and optimize staff utilization across your organization to increase revenue per employee, client satisfaction and your organization's profitability.

Beyond Software Project Entry Screen

With Beyond Software's Project Accounting Suite, you can:

- Streamline setup and delivery of complex projects with templating
- Set up an unlimited number of projects to track your activity
- Create budgets and track results
- Manage your resources and track all aspects of costs versus revenue
- Capture and compare actual time to budgets to actively manage the project to profitability

- Budget and record time down to the task level, giving project managers visibility while improving cash flows and billing cycle times
- Review time and expense before they are charged to a project to eliminate errors at the source
- Identify when a change order is needed to ensure you get paid for all the work you perform
- Enter time and expenses via the web, supporting multiple offices or work locations and streamline employee reimbursement
- Use Business Intelligence Reports and Consoles to proactively analyze and manage your projects to profitability
- Increase management's visibility into projects real-time that allows evaluation of profit margins, unbilled balances, utilization rates and improves decision making
- Provide your project managers with accurate information to manage the project revenue and expenses
- Manage projects proactively to maintain service quality and ensure profitability
- Handle multiple billing requirements with our flexible invoicing and billing features

Beyond Software offers a flexible, powerful project suite to help your organization grow profitably.

Project/Task Management: allows you to setup an unlimited number of projects, manage your resources and track all
aspects of costs versus revenue so you can proactively analyze and manage your projects to profitability. Our project
management system allows you to track project types, start and end dates, customer information and much more, all
while being able to break the project down into various tasks. Tasks can be individualized by project and provide a
way to organize and track your projects. You can budget and record time down to the task level to get a better
understanding of your projects and ensure they are progressing as desired.

Completed 1st phase

Time Entry: allows employees to book and track time spent on projects and capture detailed notes on the work completed, with the option of displaying those notes in invoicing. You can base the cost of labor on an employee rate or a rate at the labor class level. You can then optionally bill the labor at a rate specific to a number of possible options such as the project, task, resource, or account. Since Beyond Software is delivered via the web, employees can enter their time whenever they are connected to the web instead of waiting until they are back in the office. Once entered, the time can be immediately routed for review and approval. This enables you to shorten your billing time and catch errors early.

Beyond Software — Time

• **Invoicing:** allows you to use flexible billing options to bill your time and/or expenses, with numerous options to base the billing rates on (such as labor class, project account, resource, date, and/or project). Multiple invoice formats are available so you are able to tailor the customer invoice to your specifications, by project, and stipulate the billing schedule desired.

- Project Budgeting: allows you to quickly budget your projects down to the detail level your organization requires, from a blank "revenue vs expense" budget for simple projects to Project/Task/Account combinations for more complex and detailed projects. This makes it simple to analyze how the project is progressing as the actual work is completed by comparing actual and budgeted time. The detail level is configurable on a project-by-project basis.
- Business Intelligence: allows you to analyze the progress and profitability of your projects using built-in SSRS reports, or utilize our powerful Business Intelligence Consoles to obtain relevant insight into your projects. The consoles provide a flexible format that allows you to quickly and easily conduct powerful self-service analysis enabling you to review your project data in the format that best suits your requirements. You can add and remove columns, filter data, or customize and group the data. If you have questions about a particular transaction, you can click on the document number to drill back into the source transaction. Optionally, data can also be exported to Excel for further analysis.

• Expense Entry: allows employees to enter expenses directly to a project, and gives you the option to reimburse the employees for these expenses. Expenses can optionally be marked up (either as a unit rate or a percentage) for billing purposes. Once entered, the expense report can be immediately routed for review and approval, keeping the invoicing process moving and leading to better cash management. You can even attach receipts to the report making expense reporting paperless. Various expense types can be configured to simplify the data entry and for reporting and grouping after the data has been entered.

Beyond Software — Expense

- Resource Scheduling: allows you to plan out your projects and resources to ensure all employees are utilized effectively and decreases your cost by putting the right people, on the right project, at the right time. Resource scheduling enables you to assign resources to projects on a week by week basis. You can quickly see which resources have availability for each week, as well as, a detailed analysis of what work is scheduled and workloads of employees and contractors, to determine whether a resource is overbooked or a project is going over budget in terms of planned hours. Resource scheduling will enable you to balance and optimize staff utilization across your organization.
- Document Management: allows you to attach related or supporting documents, contracts or files from other programs (such as Microsoft Word and Excel) in all modules. You can also attach a web address (URL) to a record in order to provide access to information available on the internet/SharePoint etc.

Your organization's brand is largely affected by client perceptions shaped through interactions with your professionals and project experiences. Consistent, dependable service builds strong and long-lasting customer relationships. So, contact us today to see how Beyond Software's Project Suite can help you drive organization-wide operational efficiency by helping your employees consistently deliver profitable project plans and results on-time and on-budget with high reliability.
